

FTP from PC to iSeries.

This will show you how to run a file transfer from your own PC, onto a savefile on the iSeries.

In this example we are going to transfer a library called BUENGDFPT to a savefile on the iSeries with the same name. Right now the savefile with the library is located on your PC, after you downloaded it from our FTP server.

- Create an empty savefile on your iSeries:

```
CRTSAVF FILE(BUENGPTF/BUENGDFPT) TEXT('OPRS, Buengdft')
```

- Start a FTP from a DOS prompt on your PC, then type this:

```
FTP 999.999.999.999 (Replace the "9" with the actual IP for your iSeries)
```

- Enter a valid username and password

- Enter "bin"

- Enter "cd buengptf"

- Enter "lcd c:/temp" (replace temp with the actual directory where the savefile is)

- Enter "put buengdft"

- After you see "transfer completed successfully:

- Transfer the next savefile, then

- Enter "quit"

You are now ready to restore the savefile. Follow the instructions for the installation your about to do. (PTF or new version of OPRS)
