

## **Upgrade instructions from OPRS 9.0 to version 9.3.**

Before you start, make sure you have downloaded the 2 savefiles from our FTP Server, and done a FTP from your PC to the BUENGPTF library on your iSeries server. Also make sure that you have downloaded, restored and ran the OPRS precheck job, that will identify possible problems. See our website for more information.

### **1. Check if any important jobs are running or about to run.**

Choose option 2 on the PJOB menu, to see if any scheduled jobs is about to start, or run WRKSBSOB PDSOPRS to see if any important jobs are running.

### **2. End the PDSOPRS subsystem**

```
endsbs pdsoprs *immed
```

Run WRKSBS to make sure it has ended.

### **3. Rename the OPRS libraries**

```
Rnmobj BUENGDTA *LIB BUENGDTA90
```

```
Rnmobj BUENGgen *LIB BUENGgen90
```

### **4. Restore the new libraries from the downloaded savefiles**

```
Rstlib buutvdft dev(*SAVF) savf(buengptf/buutvdft) rstlib(buengdta)  
option(*NEW)
```

```
Rstlib buutvgen dev(*SAVF) savf(buengptf/buutvgen) rstlib(buenggen)  
option(*NEW)
```

After the restore is done, enter PDS to set the library list.

### **5. Start the upgrade.**

```
pupgrade93 confirm(*YES)
```

### **6. Start the PDSOPRS subsystem**

```
strsbs pdsoprs
```

### **7. Monitor OPRS closely for the next few hours**

Check option 3 on the PJOB menu, to make sure jobs are being executed normally.
